***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claims 1 and 2 are rejected under 35 U.S.C. 103(a) as being unpatentable over Harshfield (US 6,413,812B1).

Harshfield discloses the steps of forming oxide spacers 401 on the sides of a structure(col. 9, lines 8-10), forming spacers 701 on opposite sides of the oxide spacers(col. 9, lines 15-20), and using the spacers to form an image transfer structure as shown in Fig. 13 and Fig. 14. The starting structure includes multiple layers, including gate dielectric and gate conductors as shown in Fig. 1.

Harshfield is silent with respect to the first and second mandrel.

Although Harshfield is silent with respect to first and second mandrels,it is believed that the first structure shown in Fig. 11 on which the first spacers 401 are formed can be considered the first mandrel and that the first spacers then are the second mandrel for the growth of the second spacers.

#### ***Allowable Subject Matter***

Claims 3-11 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

The prior art of record does not teach all of the limitations of the objected to claims, for example "a poly etch stop layer, a first nitride layer...a second thinner nitride layer".
